LUXURY FIREPLACES

Intelligent Simplicity

Designed and manufactured in New Zealand, Escea combines cutting edge contemporary design, high energy efficiency and innovative technology to create a range of world-class luxury fireplaces to warm not only your home, but also your heart.

"Excellence in design coupled with a focus on energy efficiency ensures your new Escea fireplace will become the focal point of your home. The atmosphere created will make your living space the envy of all those who share in its warmth and style; you will congratulate yourself daily for choosing an Escea fireplace."

A handwritten signature in black ink that reads "Nigel Bamford".

Nigel Bamford
CEO, Escea

DX1500 | FRAMELESS

Simply Exceptional

Exceptional homes demand exceptional features. No home is complete without the luxurious warmth and soothing ambience of a stylish yet environmentally friendly fireplace in the living space or outdoor entertainment area.

Because a fireplace will always be the centre of attention, it should be beautiful, efficient and easy to use. Escea fireplaces combine innovative contemporary design with quality of the highest magnitude.

Escea fireplaces can be installed just about anywhere. Their zero clearance approvals allow them to be built directly into timber and plasterboard false chimney breasts or existing masonry chimneys. Unlike many other fireplaces on the market, wall construction with expensive heat-resistant materials is unnecessary. Escea indoor fireplaces are approved to be sited directly below a wall-mounted TV screen, allowing enjoyment of the fire and TV at the same time, while offering intriguing design opportunities.

DX1500 | FRAMELESS

Eco-friendly Comfort

For every fireplace built a tree is planted.

Not only does Escea design and produce fireplaces with energy efficiency and environmental impact in mind - a tree is also planted for every fireplace produced.

Among the most efficient gas fireplaces in the world, Escea's DX and DL Series fireplaces help minimise your carbon footprint.

TREE PLANTING PROGRAM

DL1100 | VELO (BEVELLED) FASCIA

Handcrafted Perfection

Every single fireplace that leaves the Escea factory receives the same care and attention as if it were the first.

Designed and manufactured in New Zealand, Escea's dedicated team take great pride in finishing fireplaces to the high standard for which they have become renowned, both here, and around the world.

EF5000 | FERRO (SLAB) FASCIA

Fireplace range overview

INDOOR MULTIROOM

These multiroom fireplaces combine impressive flame display visible from one or two rooms with Heat Ducting Technology to keep several rooms warm. The Smart Heat control system creates the most sophisticated fireplaces on the market.

FIREPLACES: **DX1000 | DX1500**

INDOOR HIGH OUTPUT

The high output fireplaces are a perfect balance of high performance, efficiency and intelligent control technology. These fireplaces will be the focal point of your home, and are available in a variety of sizes and looks to suit any decor.

FIREPLACES: **DL850 | DL1100**

INDOOR LOW CONSUMPTION

The Escea ST900's low energy consumption makes it the ideal fireplace choice as a secondary decorative heat source, or for heating a smaller living room, bedroom or office.

OUTDOOR

Escea outdoor gas or wood fireplaces let you enjoy the open air while staying warm. These fireplaces create a dramatic focal point to any outdoor gathering, adding sophistication and ambience to any occasion.

FIREPLACE: **ST900**

FIREPLACES: **EF5000 | EW5000**

DX Series

HIGH EFFICIENCY MULTIROOM FIREPLACES (GAS)

Best Design Awards
Finalist 2012

Setting new standards in gas fireplaces, the Escea DX Series combine an ultra wide flame, up to 5 Star efficiency, Heat Ducting Technology and Escea's exclusive Smart Heat control system to create the most sophisticated ultra wide multiroom fireplace on the market.

The sheer width of the flame pattern makes an impressive, dramatic statement that looks great single sided, but looks even more spectacular with Escea's double sided see-through option. The DX1000 and DX1500 capture up to 90% of the available heat and return it back into the room via Escea's heat ducts. This system ensures that the heat travels to the far ends of your room, providing quiet and complete room heating. You can even duct some of the heat into the hallway to warm the bedroom

end of the home. The DX Series uses Escea's latest Powered Direct Vent flue technology which allows both horizontal and vertical flue runs. In addition to the Escea bevelled fascia, the DX Series offers a frameless look - so a special focal point can be created with the imaginative use of wall materials. The DX Series fireplaces come supplied with reflective side panels to mirror the flames dancing over the unique Crystalight fuel bed or wood pieces.

HIGH EFFICIENCY FIREPLACES (GAS)

Best.

Best Design Awards
Finalist 2013

The DL Series gas fireplaces are the perfect balance of high performance, up to 5 star efficiency, and new generation control technology, coupled with the stunning beauty that is Escea.

The DL850 and DL1100 point the direction for the future of gas fireplaces while at the same time following on from the highly regarded Escea IB Series fireplaces. Redesigned from the base up these fireplaces out perform the in all areas. They are more efficient, have a higher heat output, and are quieter. Escea's new generation Smart Heat controller coupled with Escea's new Powered Vent Technology leaves you in control.

With over 9 kW of heat output and up to 5 Star efficiency these

fireplaces generate enough heat to quickly heat the largest of rooms, making them perfect for any sized home.

The DL Series uses Escea's latest Powered Direct Vent flue technology which allows both horizontal and vertical flue runs. The DL Series flue can even run under the floor to create an island in the middle of your room.

The DL Series accept a wide range of the Escea fascias and fuel beds, allowing you to perfectly match your décor.

ST900

LOW ENERGY CONSUMPTION FIREPLACE (GAS)

The sleek ST900 gas fireplace uses only a small amount of energy and offers flexibility in design and installation.

The ST900 fireplace uses only 1/3 of the gas of an equivalent size open gas fireplace, and is completely silent in operation. The ST900 is ideal for adding ambience and additional warmth to a house with a heat pump or underfloor heating. Thanks to its shallow depth, direct vent flue system and zero clearance rating, the ST900 can be installed almost anywhere (even in bedrooms). The ST900 comes supplied with

a battery pack, which allows the fireplace to continue to operate during power outages.

The ST900 fireplaces come with a battery-powered wireless remote control. This can be used to light the fire and to adjust the flames. A built-in thermostat allows the desired room temperature to be set. The remote also offers a 7-day timer for automatic control of the fireplace.

OUTDOOR FIREPLACES (GAS OR WOOD)

Just because it's a little cool outside it doesn't mean you have to stay indoors.

Escea outdoor gas or wood fireplaces let you enjoy the open air whilst still staying warm.

The Escea outdoor fireplaces create a dramatic centre point to any outdoor gathering, adding sophistication and ambience to any occasion.

The EF5000 is a great looking gas fireplace designed for quick convenient heat at the push of a button. Whether you are planning on entertaining all night or are just wishing to unwind after a day at work, the EF5000 gas fireplace is ideal. The innovative design of the EF5000 means no flue is required, and the fireplace is zero-clearance, so can be installed

straight into any timber-framed external construction.

If you prefer the sight, smell and crackling of an open wood fire, and love to cook outdoors, then the EW5000 outdoor cooking fire is the one for you. For long life, Escea constructed its firebox of high quality 4mm thick steel. The EW5000 requires a fully non-combustible structure such as masonry, stone, concrete or brickwork, and also requires a standard flue. The EW5000 can be finished with or without the stainless steel Slab fascia.

COOKING PLATE (EW5000 ONLY)

To allow you to enjoy BBQ cooking, the EW5000 features a cooking plate which can be placed at three different heights to regulate heat. When not in use, the plate can be conveniently stored under the ash pan.

Key Features

Escea's continuous research and development provides you with the latest in innovative features.

SmartHeat

The intelligent new control system by Escea lets you control your fireplace in ways never before possible.

Escea's unique Smart Heat system allows each fireplace to connect to the internet via cable to your home router. You can then turn on your fireplace from any location via a secure web screen or through our iPhone or Android smartphone app. On cold nights you can turn your fireplace on as you begin the drive home so your house is warm and inviting on arrival.

The Smart Heat system constantly monitors the temperature in the room, and makes adjustments to the fireplace to ensure the room is kept at the exact temperature you have requested. It will automatically ramp the heat output and the room air fan up and down through an infinite range of speeds, so the fan is never running too fast or too slow. This makes the fireplace extremely energy efficient and quiet.

AVAILABLE FOR

DL850

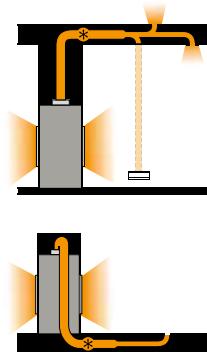

DL1100

DX1000

DX1500

Heat Ducting

Escea's unique Heat Ducting Technology turns your fireplace into a multiroom heating unit by pushing the fireplace's warmth to the farthest reaches of a room, boosting the efficiency and heat output of the DX Series fireplaces.

The ducts transport warm air through ceilings, walls and floors, circulating heat not just within the room, but throughout the house and even between levels. The main duct pipe runs from the fireplace either over the ceiling or under the floor. The warm air is released through ceiling, floor or wall outlets.

The advanced technology automatically adjusts the heat output and speed of the inline fan so that the room constantly remains at your desired temperature. The system improves the air transfer within your home by heating the entire space evenly before recirculating room air back through the fireplace.

AVAILABLE FOR

DX1000

DX1500

Powered Direct Vent

Escea's Powered Direct Vent is a balanced flue that uses an externally-mounted fan unit controlled by the fireplace's Smart Heat control system. Two flexible pipes run from the fireplace to the fan unit. One removes spent combustion air from the fireplace; the other draws fresh air for combustion from the outside.

For horizontal termination, the external components are housed in a slim-line stainless cowl which presents a minimal visual profile.

This system is also available with a vertical termination option that allows for through the roof installation.

Flue runs of up to 12 metres are possible when using poly pro flue extension kits.
