CONTEMPORARY Design

Control the Enviro from the comfort of your chair

With the Enviro, there's no problem controlling temperature. With the touch of a button on the remote controller pad you control heat output, flame height and even program when the Enviro turns on and off.

Logs

Pebbles

Coals

Logs, Pebble or Coal options

With the option of glowing coals, traditional wood or ultra modern pebbles the Enviro allows you to customise the design to suit your decor.

Optional painted fascia and door frame

Design Style

The Heatmaster Enviro has been designed in consultation with Australian architects, builders and end users. The result is a unique gas fireplace with clean soft lines and a simple elegant style which is perfectly suited for the Australian open plan living spaces.

Option of black or chrome fascia

Stylish, contemporary design
with a large rectangular
glass viewing area with
clean, soft lines that
have no grills
or louvers

With a strong focus on cutting edge technology and design features, the look of the Enviro had to reflect the same innovation. The outcome is streamlined soft lines, a wafer thin profile with a generous glass frontage for greater depth of viewing and superb ambience.

HEATMASTER'S
ENVIRO

ENVIRONMENTALLY friendly

Star Rating

The Enviro's been designed with the environment in mind. Now you can have a heater with an energy rating of 4.6 stars. So you're not only more efficient with your energy use but your helping the planet.

Energy Efficient & Low Running Costs

Once you set your thermostat control, your Heatmaster enviro will modulate the flame and gas consumption as required to achieve your desired temperature. If the room temperature exceeds your set temperature the heater will turn off until the room drops below the set temperature again. By not wasting any excess gas, you will help lower the impact on both, the environment and your gas bills.

Heat transfer

By utilising the Enviro's built in heat ducting system you can transfer a portion of the heat to a second room in the house, maximising the efficiency of the fire.

Packaging

All Heatmaster Enviro Gas Fires are packed with recycled cardboard.

In a world of environmentally changing parameters, Heatmaster has placed a very high importance on the energy efficiency and environmental impact of the Enviro

AUSTRALIAN MADE AND OWNED

The Enviro is an Australian owned product which was designed in Australia for Australian conditions. It is also manufactured in Australia.

PACKED WITH features

A duct can be placed in the floor or ceiling depending on the individual installation

Icons on the remote control indicate intensity of both flame and fans

The thermostat can also be set to turn itself on and off at predetermined times to ensure that your Enviro is warming your home when you get up in the morning or arrive home from work in the evening. All through a stylish remote control.

Direct vent / Balanced flue technology

The Enviro uses direct vent technology to bring outside air into the firebox through the flue system so that the air within your room is not compromised.

The Enviro uses fully flexible flue which can be run vertically through the roof, horizontally through the wall or down through the floor.

Australian made and owned

The Enviro is an Australian owned product which was designed in Australia for Australian conditions. It is also manufactured in Australia.

Heat Output & ducting option

The Enviro has been designed to run so efficiently that it is capable of heating up to 250 square meters and includes an option of ducting a portion of the heat to a second room in the house.*

Programmable thermostat

The Enviro comes standard with a programmable thermostat which allows you to control the heat output into your room. Once set, the thermostat will modulate the flames and fans between a high, medium and low setting to ensure your room reaches and remains at your desired temperature.

* The heating capacity will vary depending on room configuration, ceiling heights, windows and insulation

For the next generation of
gas fires it is important that
your fireplace not only
looks great but also
enhances your
lifestyle

ENVIRO INSTALLATION'S a breeze

Please contact your heatmaster dealer for full installation details

Simplicity of Installation

The Enviro's revolutionary design does not stop with the unit. Installation is a breeze with minimal time needed to get you up and running.

Framing dimensions

Firebox dimensions

Direct vent/Balance Flue

The Heatmaster Enviro utilizes two fully flexible flues. The first, a 58mm diameter pipe to expel the gas fumes, the second, a 65mm diameter pipe to bring fresh air into the firebox. These flues have the option to be run through the roof, through the wall or through the floor.

Vertical flue on wall

Wall penetration with balance flue

Internal wall under floor with horizontal balanced flue max length 4.0 metres
