Nectre The Grand

Its a grand feeling

You know the feeling when you walk into a nice, big, cosy room warmed by a dancing living fire? Grand isn't it? We have captured that feeling with our largest gas log fire, named appropriately, The Grand.

The Grand is a big fire with an opening of 700mm and a heat output of 5KW. It is available in two configurations, either as a burner and log kit, with manual valve to fit existing fireplaces, or in a "Zero Clearance Box", with electronic ignition and 3 speed fan, for false chimney applications.

The Grand will complement any decor. It will fit nicely into an existing traditional fireplace, or, because it's powered by gas and needs no hearth, will enhance the spacious harmony of modern, contemporary decor.

However you won't love The Grand for its looks alone! It's also a very practical way of heating your home. One press of the electronic ignition button and you'll be enveloped in warmth. It's a warmth that can easily be controlled using high or low flame and one of 3 fan settings. Because The Grand runs on LPG or Natural gas, there's no ash or wood to chop. So isn't time you became comfortable on a grand scale!

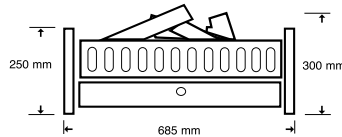

The Grand with stainless steel surround and control cover.

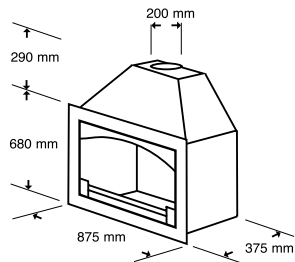

The Grand - Standard.

Type 1 burner and log kit, with manual valve, is available for existing fireplaces. Height of 300mm includes log kit. The burner is 300mm deep.

Type 2 in Zero Clearance Box, with electronic ignition, for false chimney breast application.
