(Set into an FSU - Free Standing Unit)

BF5000 Outdoor Stainless

“In striving for perfection Escea have created the ultimate mix of home heating with a level of style that will see your Escea gas fireplace become the focal point of any room. I am confident that of all the items you have in your home, an Escea gas fireplace will be the one that you will congratulate yourself daily for purchasing.”

Nigel Bamford
Managing Director, Escea.

Escea is a classic success story. Three young men with a strong vision and passion set out to turn their idea into a great business. Their idea - that the home fireplace should not only be efficient and easy to use, but most importantly it should be a thing of beauty.

Business growth has been dramatic and the company now exports its award winning designs to several other countries. The success of the company can be directly attributed to not just good product design but to great product design.

Escea believes that innovation in home heating must also be gentle on the natural world and that the inefficiencies of an open fronted fireplace are no longer an environmentally acceptable option. To further underline their dedication to the environment, the company has planted a substantial forest to help absorb carbon, because Escea believes that clean skies and fresh air do matter.

Escea is continuing to enhance Australasia's reputation for producing truly innovative world leading products.

Colour Options:
Satin Black, Metallic Silver & Rosefine Bronze

IB Mesh Deflector Screen

Both the IB850 and IB1100 come with a deflector screen. This fine mesh screen increases the contrast of the flames and at the same time virtually eliminates any reflections. The screen also offers additional protection making it harder for young fingers, or clothing, to touch the hot glass.

IB SERIES

This is luxury. With Escea's IB series of gas fires you give yourself heat for the largest of living areas, while knowing you own a work of modern beauty with the latest in control technology.

The IB series remote is a thermostat; automatically adjusting the fire's heat output and fan speed to maintain your chosen temperature. The remote also allows you to set timer options, flame effect and fan boost and since flames are the focal point of any fireplace, our carefully engineered fuel dynamics provide natural looking flames whilst still maintaining high efficiency heating.

With a range of elegant fascia colours combined with the choice of the wide aspect IB850 or the ultra wide IB1100, this series gives you the opportunity to create a stunning centerpiece to become the stylish heart of your home.

REMOTE CONTROL

The IB series gas fires also come with an easy to use wireless control. Take it to the part of the room you are sitting in and set the thermostat so the heater knows exactly how warm you want to be and how warm you currently are. Its intelligent thermostat will work to ensure the room is warmed to the desired temperature. The wireless control also allows you to turn your heater on or off, boost the fan speed to heat your room very quickly or simply turn your heater on to the 'flame effect' mode. You can also set the heater to activate at different times of the day, so that you can wake up or come home to a warm house.

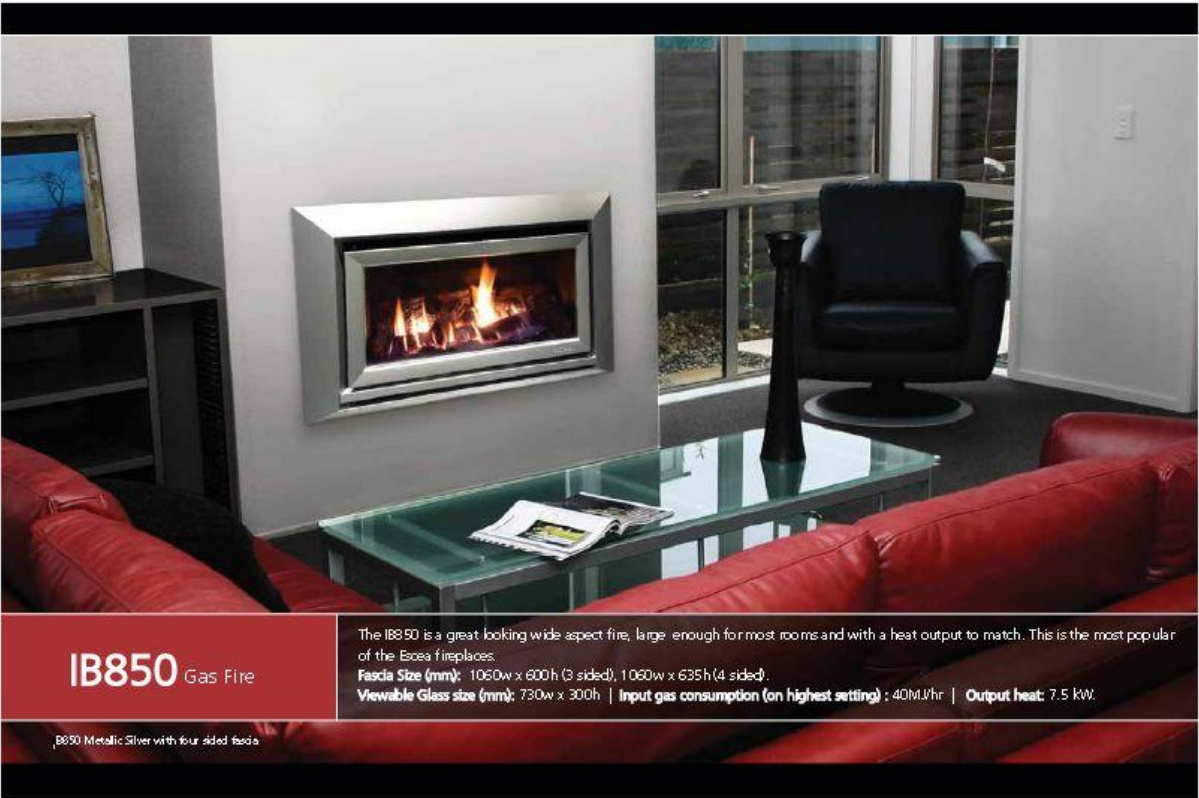

IB1100 Satin Black 4 Sided Fascia

IB1100 Satin Black 4 Sided Fascia

IB1100 Ultra Wide
 Photo: Metallic Silver with four sided fascia

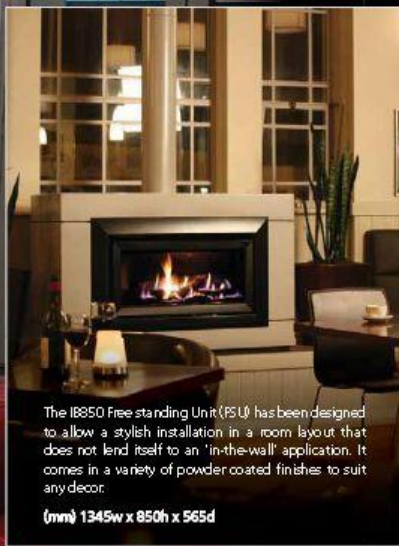

The IB1100 is the widest of the IB series fires. Whether you have a big room, a big flat panel TV or you just want to make a stunning visual statement. This is the fire for you.
Fascia Size (mm): 1360w x 600h (3 sided), 1360w x 635h (4 sided).
Viewable Glass size (mm): 1030w x 300h | **Input gas consumption (on highest setting):** 40 MJ/hr
Output heat: 7.9 kW.

IB850 Gas Fire

The IB850 is a great looking wide aspect fire, large enough for most rooms and with a heat output to match. This is the most popular of the Bocea fireplaces.
Fascia Size (mm): 1060w x 600h (3 sided), 1060w x 635h (4 sided).
Viewable Glass size (mm): 730w x 300h | **Input gas consumption (on highest setting):** 40 MJ/hr | **Output heat:** 7.5 kW.

IB850 Metallic Silver with four sided fascia

The IB850 Free standing Unit (FSU) has been designed to allow a stylish installation in a room layout that does not lend itself to an 'in-the-wall' application. It comes in a variety of powder coated finishes to suit any decor.

IB850 Free Standing Unit

IB SERIES Fascia Options

When purchasing the IB Series you can choose between a three sided or four sided picture frame fascia depending on your installation needs. The three sided fascia is for use with a hearth, while the four sided fascia is designed for existing or purpose built wall cavities at any desired height up a flat wall.

EF5000 Outdoor Fireplaces

Lounge outdoors on cool evenings in comfort with the Escea EF5000. This wide aspect, open-fronted gas fire will give your outdoor area its finishing touches of warmth and sophistication while offering a natural focal point for any gathering. The fascia is formed out of high grade stainless steel ensuring your EF5000 will maintain the strong purity of its appearance for years to come.

You have control of the EF5000's heat output via a simple on/off switch.

Escea's design for this gas fire has eliminated the need for a flue, so set up couldn't be easier.

As this gas fire is zero rated, it can simply be installed straight into any timber-framed external wall or masonry cavity. Escea also offers a 'ready-to-build' kitset wall unit so the fire can be placed in any outdoor location you desire.

Colour Options:

Satin Black / Stainless Steel

FUEL EFFECT Options

White Coals with a decorative front panel filled with white stones

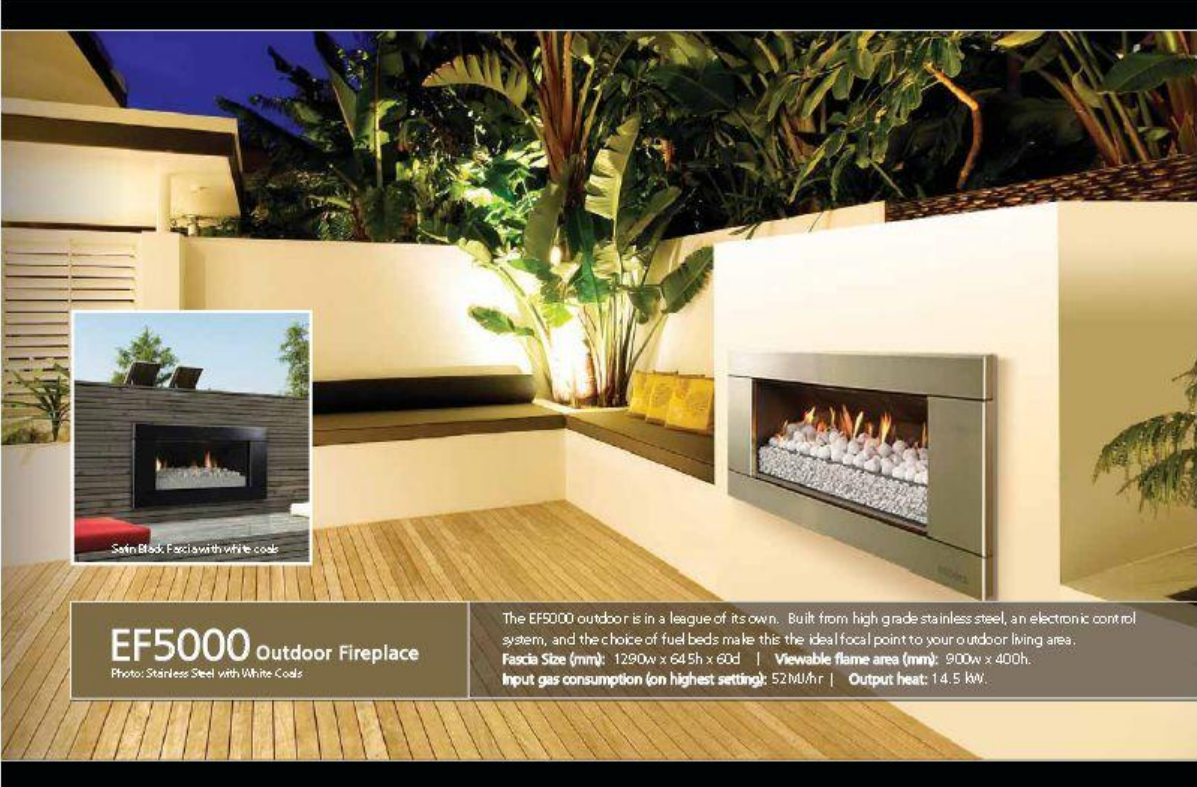

Black Coals with a decorative front panel filled with polished black stones

Flames are the focal point of any fire, so Escea provides a choice of fuel effect options to suit your décor style. The outdoor fire has a front decorative panel containing polished stones as part of the fuel effect. You can choose between a fuel bed of white coals, with white stones or black coals with black stones. Our carefully engineered fuel dynamics provide both natural looking flames and efficient radiant heating for your outdoor living

Satin Black Facia with white coals

EF5000 Outdoor Fireplace

Photo: Stainless Steel with White Coals

The EF5000 outdoor is in a league of its own. Built from high grade stainless steel, an electronic control system, and the choice of fuel beds make this the ideal focal point to your outdoor living area.

Fascia Size (mm): 1290w x 645h x 60d | **Viewable flame area (mm):** 900w x 400h.

Input gas consumption (on highest setting): 52 MJ/hr | **Output heat:** 14.5 kW.

EF5000 Weather Shield

This has been designed to protect your gas fireplace when not in use. The cover is made from stainless steel and simply slides over the top of the fuel bed and locates onto the back of the firebox to protect the gas burners from rain, wind and debris. Comes standard with the EF5000.

EF5000 KWU (Kitset Wall Unit)

< KWU

The Kitset Wall Unit is an optional quick and easy 'ready-to-build' enclosure for your outdoor gas fireplace. The kit consists of the steel frame and fastenings. After assembly it is ready for user-supplied backing board and cladding to be applied.

IB SERIES Installation

All Escea fires are zero rated, meaning they can be installed straight into a timber framed, gip lined cavity. Unlike many other fires on the market, Escea fires do not require expensive wall construction with fire rated materials.

Standard Flue

Flexi Flue

FLUE OPTIONS

Standard Flue IB Series

Escea can provide solid flue systems for timber framed installations. Our IB Series flue systems are all based on 100mm diameter inner liner and can be offset and extended in several different ways. These are explained fully in our installation instructions that are available from your Escea retailer or from our website.

Flexi Flue IB Series

The Escea flexi flue is designed to offer maximum flexibility for masonry installations. Where a chimney requires a bend, the Escea flexi flue is an excellent option. It comes supplied with a 2.6 metre length as standard and can be ordered up to 15 metres. The masonry kit comes with a cowl and chimney termination as standard.
