Innovative heating technology for tomorrow, today

CONTEMPORARY Design

Control the Enviro from the
comfort of your chair

With the Enviro there's no problem controlling
temperature. With the touch of a button on the
remote controller you can control hear output, flame height and even program
when the Enviro turns on and off.

Logs

Pebbles

Coal

Logs, Pebble or Coal options

With the option of glowing coals, traditional wood or ultra modern pebbles the
Enviro allows you to customise the design to suit your decor.

Design Style

The hear master Enviro has been designed in consultation with Australian architects, builders
and end users. The result is a unique gas fire place with clean soft lines and a simple elegant
style which is perfectly suited for the Australian marketplace.

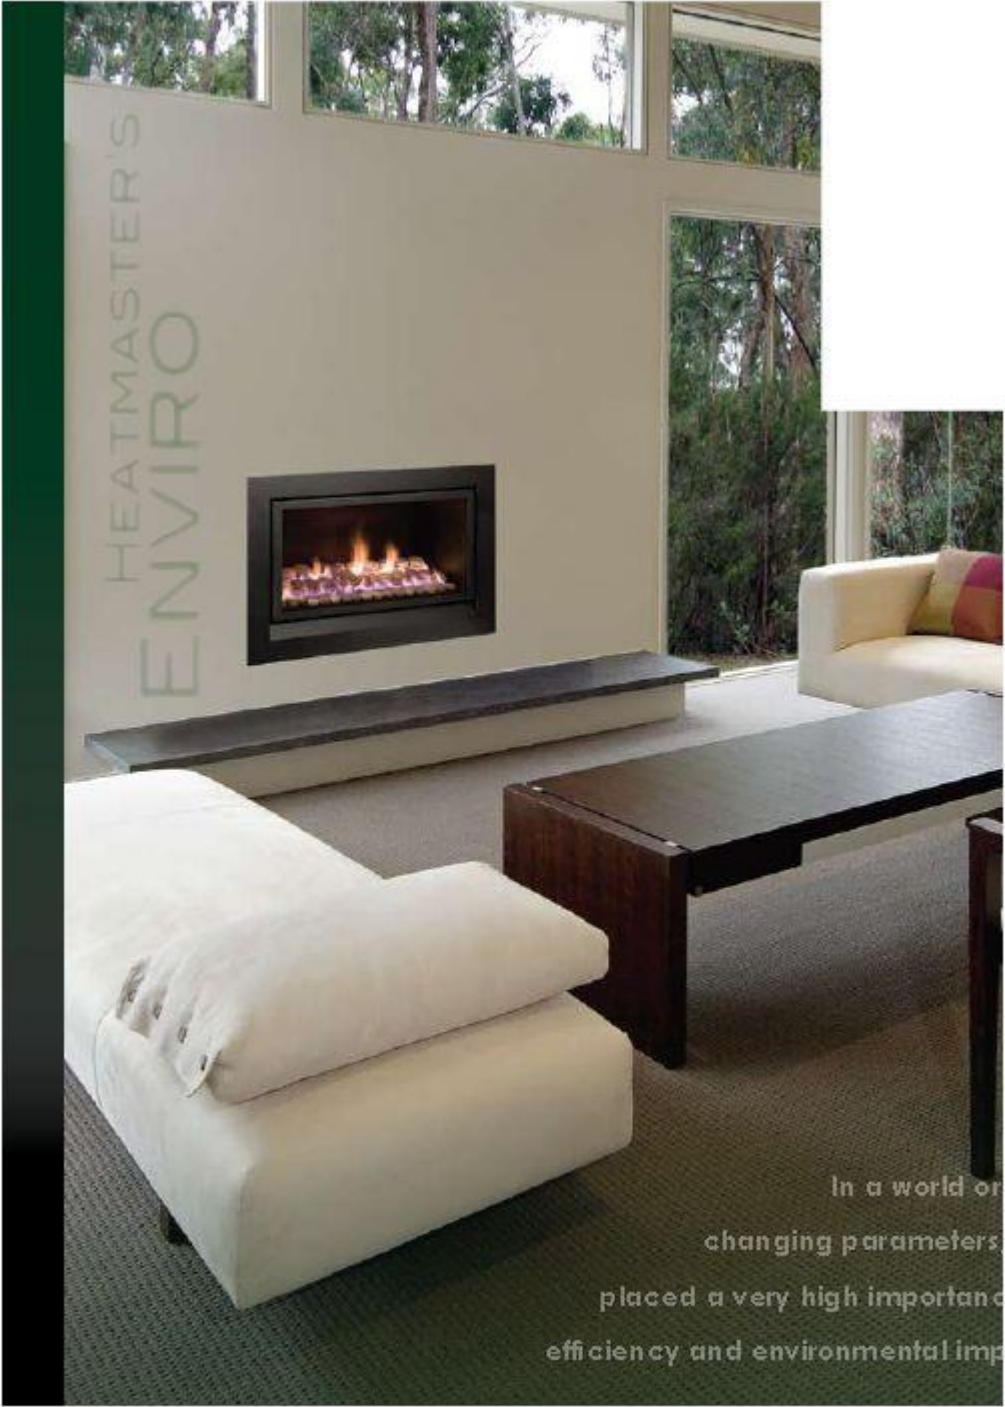

Option of black or stainless steel finish

Stylish, contemporary design
with a large rectangular
glass viewing area with
clean, soft lines that
have no grills
or louvers

With a strong focus on cutting edge technology and design features, the look of the Enviro had to reflect the same innovation. The outcome is streamlined soft lines, a wafer thin profile with a generous glass frontage for greater depth of viewing and superb ambience.

HEATMASTER

HEATMASTER'S
ENVIRO

In a world of
changing parameters,
placed a very high importance
efficiency and environmental imp

ENVIRONMENTALLY friendly

Star Rating

The Enviro's been designed with the environment in mind. Now you can have a heater with an energy rating of 4.5 stars. So you're not only more efficient with your energy use, but your helping the planet.

Energy Efficient & Low Running Costs

Once you set your thermostat control your Heatmaster Enviro will modulate the flame and gas consumption as required to achieve your desired temperature. By not wasting any excess gas you will help lower the impact on both the environment and your gas bill.

Heat transfer

By utilising the Enviro's built in heat ducting system you can transfer a portion of the heat to a second room in the house, maximising the efficiency of the fire.

From a small flame, for keeping a constant temperature to the ambience of a roaring fire.

Packaging

All Heatmaster Enviro Gas Fires are packed with recycled cardboard.

Heatmaster teaming with Landcare to give something back

Stretching more than 500km from the NSW outback down through Victoria's Murray-Sunrise National Park and all the way south to the coast, Koalpa I&I - Connecting the outback to the Ocean is a very big idea.

It has to be I&I's to turn around the environmental damage caused to this huge sweep of land - much of which has been dramatically altered since European settlement.

Land clearance for agriculture has left vast tracts of the area devoid of native vegetation resulting in many species at their wobble and pushing them towards extinction.

Large stretches of grasslands and grassy woodlands - important habitats for threatened species like the Red-tailed Black Cuckoo and Bush Stone Curlew - have been heavily cleared for cropping. In the Wimmera region around 90% of original Buloke grassy woodlands remain. They are now one of Australia's most endangered ecosystems.

Koalpa I&I also covers in part the Victorian Volcanic Plains - one of Australia's 15 national biodiversity hotspots, as well as north-western Victoria, which has been identified as having the highest number of threatened species in any one region in Australia.

It includes the Wimmera River system - which after years of drought and lack of environmental water flows has been brought to its knees.

A recent report found that salt levels in the Wimmera River at Dimboola are three times higher than the sea.

This river system is a key part of the natural systems found in an area that stretches from the Croajalons mallee to the Big Desert - an area that is also home to about 30% of Victoria's remaining wetlands.

Heatmaster have teamed up with Landcare to help support this important project. For every Enviro Gas Fire sold Heatmaster will contribute towards the Koalpa I&I Project.

act of the Enviro

PACKED WITH features

A duct can be placed in the floor or ceiling depending on the individual installation.

Icons on the remote control indicate intensity of flame.

The thermostat can also be set to turn itself on and off at predetermined times to ensure that your Enviro is warming your home when you get up in the morning or arrive home from work in the evening. All through a stylish remote control.

Direct vent / Balanced flue technology

The Enviro uses direct vent technology to bring outside air from the firebox through the flue system so that the air within your room is not compromised.

The Enviro uses fully flexible flue which can be run vertically through the roof, horizontally through the wall or down through the floor.

Australian made and owned

The Enviro is an Australian owned product which was designed in Australia for Australian conditions. It is also manufactured in Australia.

Supporting Landcare

Heatmaster has teamed up with Landcare to support the Habitat 141 project which aims to restore rivers, wetlands, bushlands and wildlife across 3 states in Australia. For every Enviro sold, money will be donated towards this important project. For more information please contact Landcare or www.landcareonline.com.au

*The heating capacity will vary depending on room configuration, ceiling height, windows and insulation.

Heat Output & ducting option

The Enviro has been designed to run so efficiently that it is capable of heating up to 250 square metres and includes an option of ducting a portion of the heat to a second room anywhere in the house.**

Programmable thermostat

The Enviro comes standard with a programmable thermostat which allows you to control the heat output into your room. Once set, the thermostat will modulate the flames between a high, medium and low setting to ensure your room reaches and remains at your desired temperature.

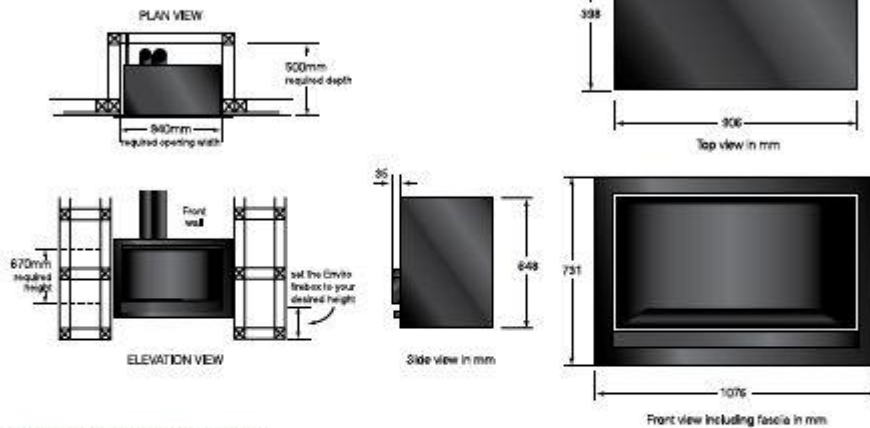

INSTALLATIONS

A breeze

Simplicity of Installation

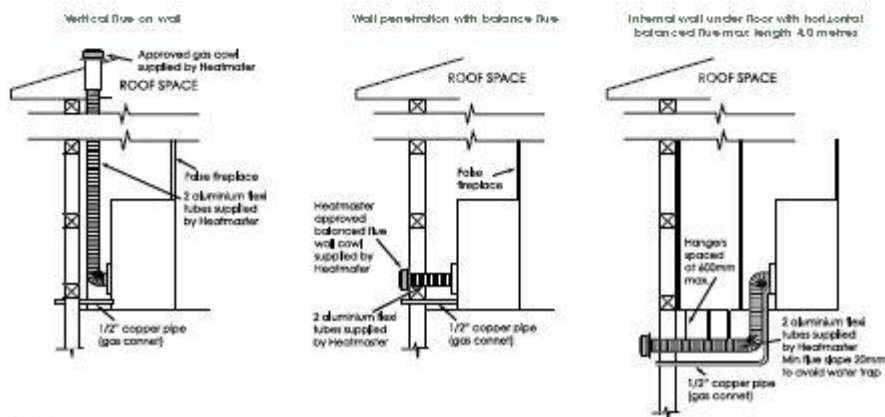

The Enviro's revolutionary design does not snag with the unit. Installation is a breeze with minimal time needed to get you up and running.

Framing dimensions

Direct vent/Balance Flue

The Heatmaster Enviro utilizes two fully flexible flues. The first, a 58mm diameter pipe to expel the gas fumes, the second, a 65mm diameter pipe to bring fresh air into the firebox. These flues have the ability to be run through the roof, through the wall or through the floor.
