- Platerack & Splashback Option
- Self Cleaning Oven(s)
- Simple Finger Tip Controls
- Large Hot Plate(s)
- Insulating Hot Plate Covers (Donard & Comeragh, optional on Errigal)

FUEL: Seasoned & dry wood, coal or briquettes all burn effectively and efficiently. Consumption and cooker output will vary according to the calorific value and quantity of fuel used.

FLUE: Appropriate 152mm flue can be connected to either top or rear of cooker. Minimum length 3.6m.

CHOICE OF BOILER MODELS:

H.P.B. Donard (Central Heating) model has the capacity to service a central heating system with radiators rated to approximately 15kw when installed in conjunction with an average size hot water supply. The circulatory system should include an indirect 180 - 270 litre (40 to 60 gallon) hot water storage cylinder. All pipe fittings are 1" (25mm) flow & return. For summer use, or at other times when central heating is not required, the boiler output can be reduced by means of a "summer grate" to reduce the size of the firebox. Components are supplied with the cooker.

D.H.W. (Domestic Hot Water) unit is equipped with a boiler (2.5 litre capacity) designed to supply hot water to the bathroom & kitchen. The boiler has 1" (25mm) tappings at the rear of the cooker to connect to a 180 or 270 litre (40 or 60 gallon) direct (low pressure) water cylinder as recommended by the plumber. The boiler is stainless steel to resist corrosion. **Non Boiler & Domestic Hot Water versions available in all models.**

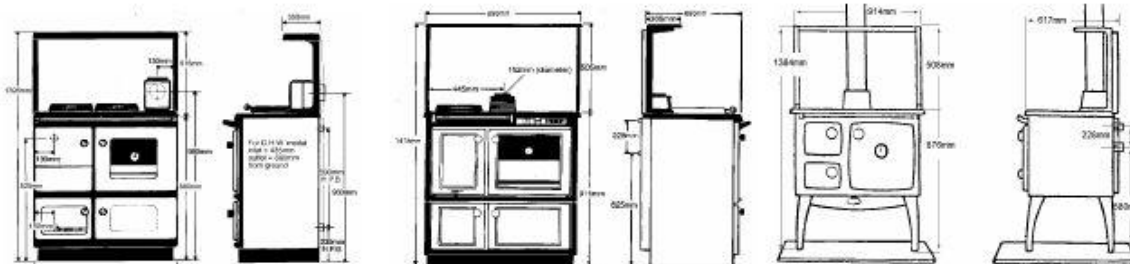

DIMENSIONS:

	Donard	Comeragh	Errigal
HEIGHT (mm) to top of platerack	1400	1420	1384
to hob level	890	915	876
