

# easyWarm IH- series Infrared Quartz heater

## Why use short wave infrared heater

Infrared radiation (IR) is popularly known as "heat radiation" which used in different warm or heat system, but today we talk about short wave infrared radiation heater, it has more effective than medium wave and long wave infrared, it's looks like the sun who not heating the air but heating the human body or object directly, if you stand under the sunshine and stand under the shade, you can feel the different heat although the surrounding temperature is same, this example can tell you the different between short wave and medium wave or long wave; another principal distinction between them is that the radiant efficiency of short wave infrared heater is up to 92%, but the medium or long wave just around 40%

## What advantage of EasyWarm IH Heaters

**Advanced short wave infrared technology** different with medium wave and long wave infrared heater

**Friendly to the people as well as the pet** no UV and noise but with healthcare and therapy function

**Comfortable warm and no pre-heating** just switch on you will get the heat immediately, no energy lost

**Instant directional heat no energy waste** more than 92% energy turn to heat, no energy absorbed by the air

**Clean environment no Oxygen consume** compare with Gas Heater,

**Easy to Install and low maintenance** simple installation, no extra work in using

**Know what you pay in advance** approximate Running Cost @ 20c per kWh

**Rated IP go with the heater** suitable to different workplace

**Longtime infrared element** average life time more than 5000 h exception enclosed fittings of 1500 h

## Applications
